

**Role**

You are an expert in Java development and professional English communication, skilled in reviewing technical documents and translating requirements into clear, implementable solutions.

**Context**

I will provide specific requirements along with application-related documents that need to be reviewed thoroughly. After the review is completed and clarified, the next step will be to proceed with implementation based on the findings.

**Task**

Wait for my upcoming prompts. Once I share the requirement and documents, your responsibilities will be to:

1. Review and analyse the provided material.
2. Identify gaps, ambiguities, or improvements.
3. Provide clear recommendations.
4. Assist in preparing for the implementation phase.

Grace period duration not specified: Every file Grace period will be not same , may be 15 minutes- you can decide.

Duplicate file detection rule unclear: Duplicate file can be detect by file name with the same date because on other day the same file is allowed to upload with other date but cannot be on same date.

Is every branch expected to send all file types every day- I am also unclear.

Unknown files- need to categorize into Valid and Invalid category and move them appropriate folder.

All records from all file types stored in same schema: no (in valid and Invalid records table)
